PROFESSIONAL SUMMARY

Entry-level Machine Learning Engineer with hands-on experience in data preprocessing, feature engineering, model training, and evaluation using Python, PyTorch, and Scikit-learn. Built and deployed end-to-end machine learning projects, including a computer vision-based disease detection system and a customer churn prediction model, using Streamlit for deployment. Strong foundation across the ML lifecycle from data preparation through model deployment, with a focus on production-ready, real-world AI solutions.

EXPERIENCE

Machine Learning Engineer Intern — A3 Services, Pune

Aug 2025 – Jul 2026

- Engineered data preprocessing and feature engineering pipelines using Python and Pandas to improve dataset reliability for downstream machine learning models.
- Trained and evaluated machine learning models against project requirements, applying evaluation metrics to guide model selection and improvement.
- Partnered with cross-functional teams to translate business requirements into data-driven machine learning solutions.
- Executed the end-to-end ML lifecycle — data preparation, exploratory analysis, feature engineering, model development, and evaluation — across multiple internal projects.
- Supported development of the Ayushman Cowfit Pro application, a live production app on the Google Play Store.

PROJECTS

Sugarcane Disease Detection System (Computer Vision)

- Built a computer vision-based image classification system to detect sugarcane leaf diseases using PyTorch & Scikit-learn.
- Trained the model on a dataset of 10,000+ labeled leaf images, achieving ~85% classification accuracy.
- Designed a recommendation engine that converts model predictions into actionable guidance for farmers, extending the system beyond classification.
- Built an integrated crop recommendation feature based on input conditions, and deployed the system with a Streamlit interface for non-technical, farmer-facing use.

Customer Churn Prediction System | [GitHub Repo](#)

- Built a machine learning classification model using Scikit-learn to predict customer churn risk.
- Trained and evaluated the model on 2,000+ customer records, applying data preprocessing and feature engineering to improve prediction performance.
- Deployed the trained model as an interactive Streamlit web application for real-time churn prediction, supporting proactive customer retention.

SKILLS

Programming: Python, C++, C

Machine Learning & Deep Learning: PyTorch, Scikit-learn

Computer Vision: Ultralytics (YOLO-based)

Data & Analytics: NumPy, Pandas, Matplotlib, Seaborn

Deployment & MLOps Tools: FastAPI, Docker, Streamlit, Git

Cloud & Development Tools: AWS, Linux, GitHub, Google Colab, Jupyter Notebook

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science

CGPA: 9.2 / 10

D. Y. Patil Agriculture and Technical University, Talsande

2022 – 2026

- Gained a solid foundation in Computer Science, Machine Learning, Artificial Intelligence, and software development, with practical problem-solving skills developed through hands-on project work.

CERTIFICATIONS

- OpenCV Bootcamp — OpenCV University** (Issued May 2026, Credential ID: 75222719dcf84d46b05a316cf2860514) — Comprehensive bootcamp covering OpenCV fundamentals, image processing, object detection, video analysis, and real-time vision systems.
- Artificial Intelligence Program — SmartInternz** — Industry-oriented program covering AI fundamentals, machine learning concepts, and real-world AI applications.
- Applied Data Science Program — SmartInternz** — Hands-on experience in data preprocessing, exploratory data analysis, visualization, and predictive modeling using Python.

ADDITIONAL ACHIEVEMENTS

- Built 30+ personal machine learning models.
- Led a team for a college project.
